REASONS FOR ALLOWANCE

1. Applicant's arguments, see "Remarks", filed 07/09/2004, with respect to the rejections under 35 U.S.C 103(a) have been fully considered and are persuasive. The rejections have been withdrawn.

2. The following is an examiner's statement of reasons for allowance:

The prior art of records do not show the limitations of a method of increasing the sharpness of a source image based on at least one auxiliary image of a higher degree of sharpness, wherein one or more auxiliary images of a field of view and the source image of the field of view comprise a plurality of pixels with corresponding spectral intensities, and wherein the spectral intensities of co-located pixels in the source and one or more auxiliary images define an intensity vector for each co-located pixel comprising "determining for each source image pixel a gain relating a differential change in intensity in the source image pixel with a differential change in intensity of a corresponding auxiliary image pixel, based on the common, lower resolution, wherein determining the gain includes dividing the pixels in the source image and auxiliary image into corresponding pixel groups each having a plurality of pixels, calculating an average value for each pixel group in the source image and for each corresponding pixel group in the auxiliary image, subtracting the average value from each pixel group to create pixel difference groups, and computing the gain between corresponding pixels of each pixel difference group of the source image and the corresponding pixel difference group of the auxiliary image" in combination with the deriving of mapping function correlating determined gains, subdividing pixel of the original source image and modifying the intensity of each subdivided source pixel.
